Summary — Meticulous and performance-driven **Embedded Systems Engineer** with 3.5+ years of hands-on experience in **Embedded software testing, Requirement analysis**, and **debugging** for critical automotive systems. Expertise in ensuring system reliability and compliance with industry standards such as **AUTOSAR, Functional Safety (ISO 26262)**, and **ASPICE**. Proven ability to deliver results under **tight schedules**, for the **Cluster, HUD, VESS**, and **ADAS** projects. Strong foundation in **Embedded C** and transferable skills for transitioning into embedded software development and efficient problem-solving.

Skills

Languages: C, C++, Python

OS: Windows, Linux

Tools: Vector Cast, MAIST, VS code, SSH, Polarion, Integrity, Git and Jira.

Technologies: ASPICE, ISO26262, AUTOSAR and CAN

Testing & Debugging: Requirement Analysis, Unit testing, Integration testing, Regression testing, Google test framework, Bug Identification & Debugging.

Soft Skills: Adaptability, Problem Solving, Critical Thinking, Effective communication, Quick learner.

Experience

Hyundai Mobis R&D

JULY 2022 – Present

Senior Research Engineer

- Conducted **Requirement Analysis, Requirement Testing (RT), Unit Testing (UT), Integration Testing (IT) and Unit Interface testing (UIT)** and **Regression testing** for Display, Cluster and HUD projects.
- Participated in and successfully cleared in **ASPICE audit** for MIS, ensuring compliance with process standards and contributing to project quality improvements
- Led **Team knowledge transfer (KT) sessions**, resolved doubts, and facilitated technical discussions to enhance team collaboration and efficiency. Delivered testing and analysis tasks on time while managing **tight schedules** for Display projects.
- Debugged and resolved **50+ critical software bugs** and identified **130+ design documentation issues**, significantly improving system stability and compliance with requirements.
- Automated key testing processes using **Python**, reducing manual workload by **30%**.
- Documented **system configurations** and **operational procedures** to enhance **knowledge sharing** and streamline team workflows.

Research Engineer

- Executed **RT, UT, IT** and **UIT** for **ADP, Cluster, HUD** and **DCU** Modules of variant car versions, ensuring compliance with automotive standards.
- Conducted **KT** and **IDP training** sessions to support team learning and growth, while creating detailed **Lessons learned and best practices (LLBP)** pages for streamlined project documentation and references.
- Conducted **Requirement Analysis** for **core Cluster technologies**, including **VESS, Display** and **DCU**.

- Automated testing workflows with **Python**, resulting in improved team productivity and reduced manual effort.

Graduate Engineer Trainee (GET)

- Conducted **UT** and **IT** for **Cluster** modules.
- Debugged embedded systems, resolving software issues and ensuring system reliability. – Authored Requirements documentation and testing protocols. **Education**

Vishnu Institute of Technology, Bhimavaram

2019-2022

B. Tech in Electrical and Electronics Engineering

Cumm. GPA: 9.29

Smt.B.Seetha Polytechnic, Bhimavaram

2016-2019

Diploma in Electrical and Electronics Engineering

Percentage: 95.8%

M.D.R.R Z.P High school, Kopalle

2016

SSC

Cumm. GPA: 9.3

Projects

Cluster/display Unit

- Conducted **UT** and **IT**, ensuring compliance with **functional safety** and automotive standards – Became familiar with industry standards and regulations – Debugged software issues, enhancing system reliability.

Data Connectivity Unit (DCU):

- Conducted **requirement analysis** and **debugging** for **gdbus** and **uart_ipc_handler** components, improving system functionality.
- Performed UT and IT, ensuring compliance with Automotive SPICE and ISO 26262.

Disassociated Centre Stack Display (DCSD)

- Conducted **requirement and interface analysis** and **debugging** for **DEM (diagnostic)** components, improving system functionality

Virtual Engine Sound System (VESS):

- Executed **iterative testing** and debugging, ensuring reliable functionality across multiple platforms
- **Reviewed and verified** product **requirements documentation**, ensuring accuracy and alignment with project specifications and standards.

Acoustic Design process (ADP) and Amplifier (AMP):

- Conducted **requirement and interface analysis** and **debugging** for **UDS (unified diagnostic systems)** components using CAN protocol and Debugged software issues, enhancing system reliability.

Achievements

- **Spot Award (2023)**: Awarded the **Spot Award** for discovering and resolving a **critical bug** in the **Cluster Module**, significantly improving system functionality and stability.
- **Spot Award (2024)**: Awarded the **Spot Award** for Identified and resolved **30+ design documentation issues** and **10+ critical software bugs**, enhancing system reliability and performance by **30%** for Cluster.
- Won **3rd place** in **Mobis Hackathon 2024** for developing a code Comparison Tool enhancing code analysis and efficiency.
- **Stellar Award (2024)**: Awarded the **Stellar Award** for Spearheaded the **automation of test workflows** using **Python**, reducing manual testing effort by **30%** and improving overall productivity.
- Contributed to the **on-time delivery** of key projects, including **DCU** and **ADAS modules**.
- Led multiple **Knowledge Transfer (KT) sessions**, training junior engineers and team members, improving team efficiency and proficiency in **AUTOSAR** and automotive standards.
- Delivered projects under **tight schedules**, achieving high-quality standards and ensuring seamless integration of **HUD**, **Cluster** and **ADAS modules** across different car variants.
- Recognized for exceptional contributions to **Cluster system launch**, which enhanced the company's technological capabilities and product offerings.
